

ROHAN SAKTHIVEL P

Data Scientist

Chennai, India | +91 701061 1469 | rohanpkg07@gmail.com

PROFESSIONAL SUMMARY

Data Scientist with 1+ years of experience designing and deploying predictive models, capacity forecasting systems, and agentic AI workflows on enterprise-grade platforms. Proficient in Python, GCP, and end-to-end ML pipelines spanning data processing, model evaluation, and production deployment. Passionate about applying data science to solve real-world infrastructure and business problems at scale.

EDUCATION

B.E. Medical Electronics | Saveetha Engineering College | 2020 - 2024 | CGPA: 8.4

HSC | Christ Matriculation School | 2019 - 2020 | 78%

TECHNICAL SKILLS

Programming: Python, C

MLOps & Cloud: GCP, Kubeflow Pipelines, Jupyter, Docker

Data Science: EDA, Data Processing, Model Selection & Training, Model Evaluation, Deep Learning

GenAI / LLMs: RAG & Vector Databases, Orchestration & Agents, Guardrails

Automation & APIs: Python Automation, REST APIs

PROFESSIONAL EXPERIENCE

Data Scientist | Tata Consultancy Services (TCS) - Chennai, India

2024 - Present

Enterprise Projects

Infrastructure Intelligence Platform - Europe's Largest Furniture Brand

- Developed a capacity forecasting model on CPU/memory utilization data from 2000+ servers, predicting future demand trends and enabling proactive infrastructure scaling that prevented resource exhaustion.
- Built an ML-driven Client Roaming success prediction model that analyzed wireless session patterns to identify roaming failures before they impacted end-users, improving network reliability across enterprise sites.
- Designed and deployed an Agentic backup monitoring dashboard that autonomously evaluates backup job health, triggers alerts, and generates incident summaries using LLM-based reasoning.

Enterprise Automation for Device Migration - Europe's Largest Clothing Brand

- Developed Python automation scripts for large-scale AOS device migration across enterprise infrastructure, integrating REST APIs for metadata extraction, validation, and migration with full error handling.
- Automated workflows previously handled by ~15 engineers across 2 shifts; reduced the project timeline from 1 year to 6 months with a 95%+ migration success rate.

Personal Projects

Stock Sentiment Analysis Bot

- Built an automated n8n workflow that scrapes and aggregates financial news, runs sentiment analysis on stock mentions, and delivers structured buy/sell/hold signals to a personal Discord channel bot.

Academic Projects

Osteosarcoma Detection using Binary CNN

- Built an end-to-end ML pipeline for bone cancer cell detection achieving 90%+ classification accuracy.
- Applied SMOTE for class imbalance handling, performed thorough model evaluation, and deployed via a Flask web interface.

PUBLICATIONS & CERTIFICATIONS

- Research Publication - IEEE International Conference (ICITITE), VIT
- Azure Agentic AI Fundamentals - Microsoft Azure Workshop Badge
- NPTEL Certified - Python Programming, Internet of Things
